

Micron plans to invest up to \$100B over the next 20-plus years to build a leading-edge memory manufacturing facility in Clay, New York.

In 2022, Micron announced its plans to build the largest semiconductor fabrication facility in the history of the United States. Micron intends to invest up to \$100 billion over the next 20-plus years to construct a new fab complex in Clay, New York, with the first-phase investment of \$20 billion planned by the end of this decade. The new fab complex will increase domestic supply of leading-edge memory, create nearly 50,000 New York jobs and represent the largest private investment in New York state history. Micron will design, build and operate the facility in accordance with its sustainability goals.

Environmental Review Process

The next step before building the planned fab complex is completing an Environmental Impact Statement (EIS) in accordance with the National Environmental Policy Act (NEPA) and the State Environmental Quality Review Act (SEQRA). The EIS will consider the potential impacts of the project on a broad range of topics including natural and physical environment and social and economic effects.

The EIS will also:

- » Document the project's compliance with Federal, State and local regulations
- » Document Micron's outreach to Environmental Justice communities
- » Include information on agency permitting and outreach

Scoping

The scoping process is an opportunity for the public to learn more about the project and provide input as Micron and Federal and State lead agencies prepare the Environmental Impact Statement (EIS).

During the EIS scoping process for the project, the public is encouraged to comment on any environmental areas of concern.

Next Steps

- » Public Scoping Meetings (Fall 2023)
- » Public Hearing on the Draft EIS (Winter 2024)
- » Official Notice of Availability of the Combined Final EIS and Record of Decision published in the Federal Register (Summer 2024)
